

Nordic registry data, turned into evidence you can *defend*.

PhD epidemiologist offering fixed-scope real-world evidence and biostatistics support for biotech, HEOR, and research teams working in Danish and Nordic health data — from protocol to publication-ready analysis, in reproducible R. You work directly with the person doing the analysis.

REPRODUCIBLE

SERVICES — FIXED SCOPE, AGREED UP FRONT

01 / SCOPE

Feasibility & scoping

A fast, honest read on whether Danish or Nordic real-world data can answer your question — with the best design if it can. Deliverable: feasibility memo, data-source map, go / no-go.

from 12,000 DKK · 1–2 days

Data mapping

Design options

Cohort feasibility

02 / DESIGN

Study design & SAP

Your research question turned into a pre-specified protocol and statistical analysis plan, ready for the data-access application. Deliverable: design document + SAP.

from 18,000 DKK · 2–3 days

Protocol

SAP

DAG / causal structure

03 / ANALYSE

Registry-based analysis

End-to-end analysis on Danish registry and cohort data — time-to-event, incidence, and causal questions — in reproducible, documented R. Deliverable: pipeline, results, methods writeup.

scoped per project · from 30,000 DKK

Survival / Cox

Poisson (IRR)

Causal inference

MICE

04 / REVIEW

Review & synthesis

Independent second opinion on an analysis or manuscript before submission — bias, confounding, design — plus systematic review and meta-analysis. Deliverable: written review + call.

from 7,500 DKK · ½–1 day

Analysis review

Meta-analysis

WHY WORK WITH ME

● Direct senior access

The person scoping your study is the person running the models and writing the results. Nothing is delegated down.

● Regulatory- and journal-grade

Pre-specified protocols and SAPs, defined outcomes, and sensitivity analyses — built to the standard a reviewer or HTA body will accept.

● Reproducible by default

Version-controlled R and documented pipelines — analysis you can hand to an auditor or re-run a year later.

● Honest feasibility first

If Danish data can't answer your question well, I'll say so before you commit budget — not after.

HOW I WORK — FOUR STEPS, NO BLACK BOX

01

Scope

A short call to pin down the question, the population, and whether the data can carry it.

02

Design

A written protocol and SAP, pre-specified and agreed before a single model runs.

03

Analyse

Reproducible, version-controlled R — documented, auditable, with sensitivity analyses built in.

04

Deliver

A report, figures, or manuscript section ready to submit — reasoning explained in plain terms.
